

ACCESS MANAGEMENT HANDBOOK

This handbook was prepared by the Center for Transportation Research and Education (CTRE) at Iowa State University. It was financed in part through funds provided by the Iowa Department of Transportation's (Iowa DOT) research management agreement with CTRE, Project 97-1. The handbook was initially recommended by the Iowa Safety Management System (SMS) Coordination Committee and was prepared under the direction of the Access Management Task Force, whose members are listed on the following page.

The authors greatly appreciate the support and advice provided by the Iowa DOT, the SMS Coordination Committee, and the Access Management Task Force, without whom this project would not have been possible. The authors also thank the Maine Department of Transportation for the use of its handbook on access management, which served as a model for much of this book. Finally, we want to thank the University of South Florida and the Florida Department of Transportation for their many excellent documents on access management; information they provided was particularly helpful in developing the chapter on public involvement.
